

Leading the Way in Megapixel Video™

ARECONT VISION TECHNICAL UPDATE

Issued 18 August 2017

Customer Advisory Regarding Competitor Multi-Sensor Adjustable View Cameras

Arecont Vision has obtained many patents for our camera technology and we continue to invest in product development. These efforts ensure our continued leadership in the megapixel surveillance camera industry, producing new features, capabilities, and camera designs that others often attempt to copy.

One such patent is for an *“Omnidirectional user configurable multi-camera housing”* used in our SurroundVideo® Omni G1, G2, and G3 multi-sensor megapixel camera series. This patent is US9690172 filed by Arecont Vision on August 2, 2016 (Application Number US 15/226,816), was issued by the US Patent Office on June 27, 2017.

Details of the patent can be found online at <https://www.google.com/patents/US9690172>.

Our patent attorney reviewed several competitors’ products. It is his expert view that competitors have infringed on Arecont Vision patent US9438782.

Arecont Vision is currently evaluating our next legal steps. Customers should be aware that this may potentially impact future availability of competitors’ products that are infringing on this patent.

The Arecont Vision SurroundVideo Omni series remain the first and best multi-sensor, omnidirectional megapixel cameras on the market, and our continued R&D efforts will bring further enhancements to benefit our customers. They are immediately available for ordering and delivery.
